(Ver. 4: revised on Oct 9, 2017)

The NUMISHEET conferences have been established as a world-class forum through which new intellectual ideas and technology in the area of sheet metal forming simulation are exchanged. This is the third conference in Asia in the NUMISHEET history. The 2018 conference features Technical and Keynote Programs, mini-symposia, three benchmark applications to compare participant's predictions with experimental results, and cultural excursion programs.

Technical Areas

Materials Modelling and Experimental Testing Methods, Friction and Contact, Formability, Necking and Fracture, Instabilities and Surface Defects, Fracture and Damage, Numerical Methods, Springback, Incremental Sheet Forming, Roll Forming, Innovative Forming Methods, and Product & Process Design and Optimization, etc.

Benchmark/Simulation Studies

Three benchmark problems are planned: **[BM-1]** Prediction of thickness strain and fracture in the hole expansion of a 980 MPa steel sheet, **[BM-2]** Fracture and springback prediction in the deep-drawing of a thick-wall cup of 440 MPa hot rolled steel sheet, and **[BM-3]** Polycrystal plasticity analysis for predicting the yield surface and the work hardening characteristics of a 5000-series aluminum alloy sheet. Details will be announced on the website on **October 2nd, 2017**.
